

**NOTE:**

- \* In cold weather, leave the choke lever up for several minutes after the engine starts and then gradually push the choke down as the engine warms up.
- \* The Posi-Torque selector lever may be moved while the engine is idling, but it is recommended that the engine be stopped.

**CAUTION:**

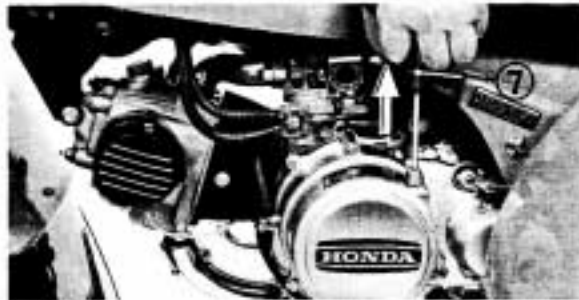

- \* *Extended use of the choke may impair piston and cylinder wall lubrication.*

- \* *Do not race the engine during the warm up period. Racing a cold engine wastes fuel and increases engine wear.*
