

## Helmet Holder

The helmet holder eliminates the need for carrying your helmet after parking. Insert the ignition key into the seat lock, and turn it clockwise to unlock. Hang your helmet (1) on the hook (2) at the seat hinge and lower the seat to lock. To remove a helmet, unlock the seat. Lift the helmet off the holder and lower the seat, making sure it is securely locked before riding.

**The helmet holder is designed for helmet security while parked. Do not ride with a helmet attached to the holder; the helmet may interfere with safe operation and result in loss of control.**
