

Carefully add distilled water to the UPPER level mark, using a small syringe or plastic funnel.

ATTENTION

- **Use only distilled water in the battery. Tap water will shorten the service life of the battery.**
- **Filling the battery above the UPPER LEVEL line may cause the electrolyte to overflow, resulting in corrosion to engine or frame parts. Immediately wash off any spilled electrolyte.**
- **The battery breather tube must be routed as shown. Do not bend or twist the breather tube. A bent or kinked breather tube may pressurize the battery and damage its case.**

(1) Breather tube
