

Exhaust Emission Control System

The exhaust emission control system includes a secondary air supply system, and an oxidation catalytic converter.

No adjustment to these systems should be made although periodic inspection of the components is recommended.

Secondary Air Injection System

The secondary air injection system introduces filtered air into the exhaust gases in the exhaust port. The secondary air injection system helps improve emission performance.

Oxidation Catalytic Converter

The oxidation catalytic converter is in the exhaust system. Through chemical reactions, they convert HC and CO in the engine's exhaust to carbon dioxide (CO₂) and water vapor.
