## **IDLE SPEED**

Refer to the Safety Precautions on page 44.

## Idle Speed:

The engine must be at normal operating temperature for accurate idle speed adjustment. Ten minutes of stop-and-go riding is sufficient.

Do not attempt to compensate for faults in other systems by adjusting idle speed. See your Honda dealer for regularly scheduled carburetor adjustments.

- (1) Throttle stop screw
- (A) Increase
- (B) Decrease

- 1. Warm up the engine and hold the motorcycle upright.
- 2. Connect a tachometer to the engine.
- 3. Adjust idle speed with the throttle stop screw (1).

Idle speed (In neutral):

 $1,400 \pm 100 \text{ min}^{-1} \text{ (rpm)}$
