

OPERATION

Starting Procedure

1. Pull the choke lever to the fully ON (B) position, if the engine is cold.
2. Press the starter button.
3. Warm up the engine until it runs smoothly with the choke OFF (A).

NOTE:

- Do not open the throttle when starting the engine with the choke on. This will lean the mixture, resulting in hard starting.

CAUTION:

- *Extended use of the choke may impair piston and cylinder wall lubrication.*

Flooded Engine

If the engine fails to start after repeated attempts, it may be flooded with excess fuel. To clear a flooded engine, turn the engine stop switch OFF and push the choke lever up to Fully Off (A). Open the throttle fully and crank the engine for 5 seconds. Wait 10 seconds, then turn the engine stop switch ON and follow the Starting Procedure.
