

## Replacement

With the upper or lower section of drive chain tight between the sprockets measure the distance between a span of 21 pins from pin center to pin center. In a new chain, this distance will measure 12.5 in (317.5 mm). If the distance exceeds 12.6 in (319.1 mm), the chain is worn out and should be replaced.

Service limit: 12.6 in (319.1 mm)
