

To safely operate your ATV, your tyres must be the proper type and size, in good condition with adequate tread, and correctly inflated.

## **⚠ WARNING**

Using tyres that are excessively worn or improperly inflated can cause a crash in which you can be seriously hurt or killed.

Follow all instructions in this owner's manual regarding tyre inflation and maintenance.

This ATV is equipped with low pressure tubeless tyres. Although the tyres are designed specifically for off-road use, they are not immune to punctures. Always select your riding area with care.

The following pages give detailed information on how and when to check your air pressure, how to inspect your tyres for wear and damage, and our recommendations for tyre repair and replacement.

### **Air Pressure**

Refer to *Safety Precautions* on page 89.

Properly inflated tyres provide the best combination of handling, tread life, and riding comfort. Generally, underinflated tyres wear unevenly, adversely affect handling, and are more likely to fail from being overheated. Overinflated tyres make your ATV ride more harshly, are more prone to damage from surface hazards, and wear unevenly.

Make sure the valve rim caps are secure. If necessary, install a new cap.
