

Wear inspection:

Check the chain wear label when adjusting the chain. If the red zone (4) on the label aligns with the tip of driven sprocket teeth (5) after the chain has been adjusted to the proper slack, the chain is excessively worn and must be replaced. The proper slack is:

15–25 mm (0.6–1.0 in)

(4) Red zone

(5) Tip of driven sprocket teeth

Lubrication and cleaning:

Lubricate every 1,000 km (600 miles) or sooner if chain appears dry.

The O-rings in this chain can be damaged by steam cleaning, high pressure washers, and certain solvents. Clean the chain with high flash-point solvent, such as paraffin. Wipe dry and lubricate only with SAE 80 or 90 gear oil. Commercial chain lubricants may contain solvents which could damage the rubber O-rings.

Replacement Chain :

D.I.D 50 V4 or RK 50MF0Z1

CAUTION:

* **The drive chain on this motorcycle is equipped with small O-rings between the link plates. These O-rings retain grease inside the chain to improve its service life. However, special precautions must be taken when adjusting, lubricating, washing, and replacing the chain.**
